

Solar Increases the Value of your Home

It seems like common sense that homes with solar panels would be worth more in any housing market. Solar panels reduce energy bills, create more sustainable energy and last for years—what's not to like? Until recently, there wasn't definitive proof that solar panels added home value. In 2015, the Orlando Lawrence Berkeley National Laboratory released a study asking an important question: are homes with solar panels really more valuable than homes without them? And, the answer was yes!

This data was also supported by a recent study from the National Bureau of Economic Research, where California economists found homeowners who power their homes with solar can recover nearly all of

premium to the sale price of the house. And federal subsidies can save homeowners up to \$10,000 off the cost of their solar energy system. In addition, Semper Solaris is offering the equivalent of the expired state solar rebate, up to \$3,000 off your new solar panels. Thus, homeowners recover approximately all their investment costs when selling.

Still not convinced that solar is the best home upgrade for you? According to Hanely Wood's 2016 Cost v. Value report, a major kitchen remodel only brings a 65% payback to the homeowner. Solar panel systems recoup anywhere from 97% - 154%.

It's important to do your homework when installing

Installing solar on your home can increase its value by up to \$24,000!

in the United States. SunPower has refined solar technology with a sleek black surface that absorbs sunlight through its entire surface area, rather than the inefficient grid cells that conventional panels use. Installing SunPower's world record panels means you'll need fewer panels on your roof to generate the same amount of power that a conventional system does. SunPower's unique Maxeon Cell technology eliminates 85% of the reasons conventional cells fail.

Solar panels are a wise addition to any home, especially with government incentives and future savings. To increase the value of your home with the best solar panels in the industry, there is only one company to call - Semper Solaris. They were recognized as SunPower's
